Wireless Interconnected Heat Alarm

System Overview

Wireless Interconnected Heat Alarm is specifically designed to continuously monitor abnormal temperature. Integrated with a high-precision thermistor and an intelligent algorithm, it triggers an alarm when a predetermined temperature is reached. It is ideal for smoky, dusty, or humid areas that may trigger false smoke alarms, e.g., kitchens where cooking fumes are present and attics, garages boiler rooms where there may be lots of dust. Powered by a 10-year sealed battery, it provides 24/7 protection against fire for a decade. Moreover, the alarm signal will be pushed to every alarms in the interconnected network and they will raise the alarm in unison.

Scene

Application scenarios include household or similar residential applications such as kitchens and garages.
